

# Legband Identification System

**Sturdy thanks to its buckle.**

Enables the operator to visually identify the milk which should not enter the normal milking system.

- Five colours available:
  - Yellow Colostrum (LB201A)
  - Pink Treated cows (LB202A)
  - Green Dry Cows + Heifers (LB203A)
  - Orange Observation (LB204A)
  - Blue Own comments (LB205A)
- Fluorescent for improved visibility, even when dirty.
- Four times harder to tear off than other style legbands.
- Long-lasting thanks to high quality polymers in the material.

# How to use your Securit'Milk Whiteboard

BEFORE ERASING, NOTE YOUR INTERVENTIONS IN THE HEALTH LOG

TREATED COWS				SECURIT'MILK		DRY COWS & HEIFERS	
COW N°	PRODUCT USED	DATE OF TREATMENT	WITHHOLD MILK UNTIL	COW N°	PRODUCT USED	DUE CALVING DATE	
							
COLOSTRUM			(Milk separately for 7 days) (14 days in case of premature calving and milk analysis)		OBSERVE		
COW N°	CALVING DATE	WITHHOLD MILK UNTIL	COW N°	REASON			
							

- The Securit'Milk board is covered with an erasable film that is easy to wipe clean and very long-lasting.
- Wipe clean using a soft cloth.
- Always use Velleda® markers for whiteboards.
- When used correctly, this Securit'Milk whiteboard provides a simple and efficient way of keeping track of your herd and makes it easier for different milkers to pass on information to one another.
- **Make sure you write down the information in the health logs before wiping your board clean.**
- The marker should be placed horizontally in its fixing clip, ideally on the blank orange section of the board. This will help get the most mileage out of your Velleda® marker.
- Securit'Milk bangle tags are machine washable in a protective mesh bag.
- Do not wash them with the water from the milking machine acid wash.
- **Don't forget to replace them regularly.**

We hope you will enjoy successfully keeping track of your dairy herd with the Securit'Milk system.
