"Stop the Drift with Roll-On Weed Control"

WeedBall® is a revolutionary new method of application which eradicates weeds easily, efficiently and safely by simply rolling the moist ball over the weeds.

There is no spraying, therefore there is absolutely no spray drift even in windy conditions.

No over spray or wastage, reduces chemical usage by up to 80%.

The WeedBall® is especially useful in controlling weeds along fence lines, streets, buildings, driveways, paths, around trees and for scattered weeds in pastures, orchards and crops.

WeedBall® is a non-spray liquid applicator system, particularly suitable for herbicide application, e.g. glyphosate (Roundup' herbicide).

WB001

The WeedBall® consists of a handle which is the liquid reservoir and an adjustable flow control system, feeding the desired amount of liquid on to a roller that dispenses it onto the ball.

The ball is designed to act as an external reservoir other than the main handle. Being made of a special durable foam storage compound the ball has a dynamic surface.

The continual flexing of the ball during operation pumps the liquid from within the ball to the outside surfaces.

This flexing also reduces materials adhering to the ball surface.

One side of the ball is flat to allow easy operation along vertical surfaces like walls and kerbs.

- Simply rolls over weeds
- User friendly
- No spray drift
- No over spray
- Targets weeds, reducing waste
- Reduces chemical usage by to 80%
- Convenient effective application
- Ideal for glyphosate (Roundup')

- Easy to use, even in windy conditions
- Equally effective on flat or tall weeds
- Durable, light weight construction
- Replacement ball and roller available
- User and mixing instructions on handle
- Reservoir holds 800ml
- Variable flow rate to suit weed density
- Helps in the war against weeds

WeedBall® applicator

"Directions for use . . ."

First time use of your new WeedBall®

Before the WeedBall® is used for the first time, submerge the soft ball in a bucket of water and squeeze out all the air. Thus allowing the ball to fill up with water.

Remove the WeedBall® from the bucket and squeezing the ball lightly remove any excess water.

Your WeedBall® is now ready for use.

Filling your WeedBall®

The WeedBall® handle holds approximately 800ml of solution when full.

Always use products in accordance with the manufacturers label instructions.

For glyphosphate (Roundup) herbicide pre-mix 1 part glyphosphate to 9 parts clean water to make a 10% solution

Set the black flow control tap to the OFF position then pour the mixture into the applicator handle.

How to apply herbicide

Turn the black flow control tap to the OFF position when not in use.

Adjust the black flow control tap to ensure the ball ALWAYS remains moist during use.

If the ball becomes too wet, adjust the black flow control tap towards the OFF position.

Simply roll the ball over the weeds, always ensuring the ball remains moist.

In dense and/or tall unwanted vegetation an application in two directions may be required.

If the ball and/or roller should become soiled, turn off the black control tap wash the ball with water.

After use empty the handle reservoir, set the black flow control tap to FULL and wash the WeedBall® applicator thoroughly with water.

Store the WeedBall® with the ball upwards, hanging it by the hole next to the black flow control tap.

How to replace the ball

Remove the retainers. Pull the ball and roller from the axles. Replace with a new ball and roller. Relocate retainers. Follow 'First time use' instructions.

IMPORTANT: Store out of reach of children. Please pay particular attention to the chemical manufacturers safety and handling instructions.
